1/18 Hello #Nephtwitter #Medtwitter, @aspneph radiology webinar topic for Dec 2021 was #Peritonealdialysis (PD) and complications. But first, let's have a poll. #Pedneph #ASPENFOAM Why is PD preferred to hemodialysis (HD) in a child with end-stage kidney disease (ESKD)?

2/18 Ans: All of the above

Other advantages of PD:

- 📌 decreased travel compared to HD
- 📌 PD can be performed in comfort of home
- 📌 decreased need for vascular access and related complications
- 📌 gentle dialysis
- 📌 being closer to a more physiologic process

PMID 34731538, 26256980

3/18 Complications can be split into infectious and non-infectious

Infectious complications include:

1. Exit site infection
2. Tunnel infection
3. PD peritonitis

PMID 32728843

4/18 Let's focus on non-infectious complications.
What are the common non-infectious complications of PD?

PMID 32728843

5/18 Ans: All of the above

Mechanical complications lead to poor fluid removal and may be due to:

1. Catheter kinking
2. Constipation
3. Catheter migration

PMID 34731538, 31028108

Classification

Mechanical	Technique-related	Other
Hernias	Ultrafiltration failure	Sleep disorder
Leak	Inadequate dialysis	Calciophylaxis
Hydrothorax	Sclerosing peritonitis	Seizure
Hemoperitoneum	Calcification	Pancreatitis
Obstruction	Hypo or Hypervolemia	Amyloidosis

8/18 Management of non-infectious complications

1) Imaging-XR abdomen: can identify hydrothorax, perforation

✚ Pros: widely available, cheaper, time-sensitive

✚ Cons: less sensitive than CT/ MRI

✚ CT abdomen is preferred if encapsulating peritoneal sclerosis (EPS) suspected

Radiographic Findings

- **Kinking**
- **Leak**
- **Catheter Malposition**
- **Sclerosing Encapsulating Peritonitis**

Ulf S. Bauer¹

OBJECTIVE: The purpose of this study was to assess the diagnostic value of MR peritoneography in the evaluation of continuous ambulatory peritoneal dialysis (CAPD) patients. **DESIGN AND METHODS:** Twenty consecutive patients treated with continuous ambulatory peritoneal dialysis who were clinically suspected of dialysis-related complications were prospectively studied with MR peritoneography. For MR peritoneography, 20 ml of gadolinium was added to 2000 ml dialysis solution (2.0 ml gadolinium per liter dialysis solution). MR peritoneography was performed with the patient lying flat (0°) and after complete drainage of the contrast material dialysis solution (0° 200 ml) as well as with the patient lying at 45° and 90°. **RESULTS:** Overall findings were detected in 17 (85%) of 20 patients and included retroperitoneal leaks (n = 6), diaphragmatic leaks (n = 2), diffuse peritoneal leaks (n = 5), and inguinal hernias (n = 2) and peritoneal adhesions (n = 1). **CONCLUSIONS:** MR peritoneography is useful for the evaluation of complications related to continuous ambulatory peritoneal dialysis and is a better modality than contrast and ultrasound. (J Pediatr Nephrol 2005; 10: 100-104)

American Society of
Pediatric Nephrology

PMID: 19325058

11/18 Metabolic complications like weight gain due to glucose load is another non-infectious complication

📌 Icodextrin reduces this side effect to some extent, but need to take the cost and availability of icodextrin into account

PMID 26256980

Figure 1 | A schematic presentation of the potential beneficial effects of newer peritoneal dialysis solutions. Abbreviations: AGE, advanced glycation end product; PD, peritoneal dialysis; RRF, residual renal function; UF, ultrafiltration.

12/18 EPS is one of the most severe non-infectious complications.

Do you know how long it takes to develop EPS?

13/18 Ans: 5+yrs

Risk Factors:

- ✚ long-term exposure to PD fluids
- ✚ multiple/recurrent peritonitis bouts
- ✚ genetic predisposition
- ✚ meds: ex-practolol, chlorhexidine

Symptoms: severe abdominal pain, persistent n/v

Diagnosis: CT scan->cocooning of bowel & cystic fluid collections

<https://radiopaedia.org/cases/8828>

PMID 34731538, 32728843, 31744097

14/18 Treatment of EPS: There is no standard treatment. PD is typically discontinued.

Early treatment with glucocorticoids, tamoxifen, immunosuppression may be useful

Symptomatic treatment: pain management, parenteral nutrition

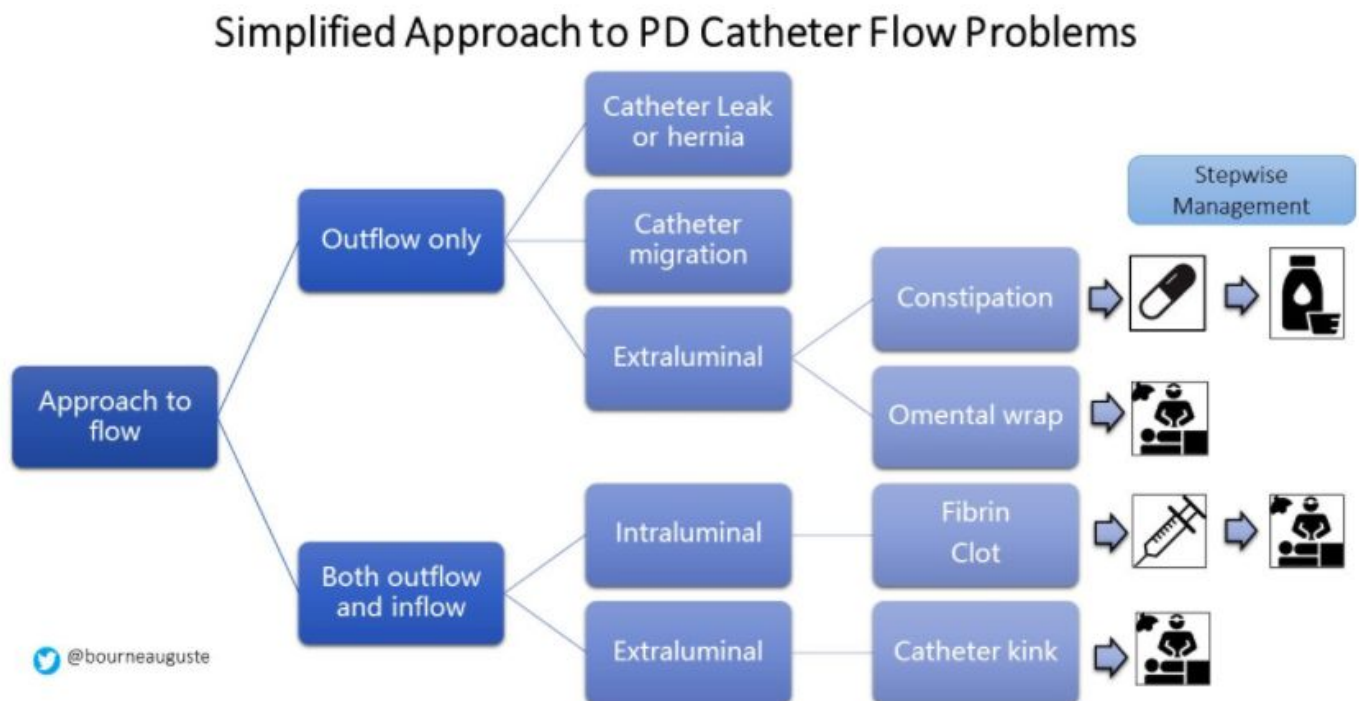

PMID 31744097

Table 1. Overview on currently applied and experimental pharmacological treatments in EPS.

Class	Drug Name	Mode of Action
Glucocorticosteroids	Prednisone Prednisolone	Immunosuppressant, inhibits monocyte chemoattractant protein 1 (MCP-1) synthesis, regulates extracellular matrix (ECM) protein synthesis, ECM protein maturation
Immuno-suppressants	Azathioprene Rapamycin/Sirolimus Mycophenolate mofetil Cyclosporine	Inhibits DNA/RNA synthesis Inhibits T-cell/B-cell activation De-novo purine synthesis blockade Lowered T-cell activity
Hormonal antagonist	Tamoxifen	Blocks transforming growth factor- β 1 (TGF- β 1) signaling
	Angiotensin converting enzyme inhibitor (ACEi)/Angiotensin II receptor blocker (ARB) Perindopril Candesartan	Blocks TGF- β 1 signaling Blocks TGF- β 1 signaling, lowered cell proliferation
Mucolytic alkaloid	N-acetylcysteine (NAC) Colchicine	Reactive oxygen species scavenger Blocks TGF- β 1 mRNA expression
Xanthine derivative	Pentoxifylline	Fibrinolytic, suppressed collagen synthesis, angiogenesis
Anti-diabetic	Rosiglitazone	Peroxisome Proliferator-Activated Receptor (PPAR)-agonist, suppressed inflammation, neovasculture
Anti-fibrotic, anti-inflammatory	Pirfenidone	Reduces tissue inhibitor of metalloproteinases-1 (TIMP-1), tumor necrosis factor- α (TNF- α), and TGF- β 1 expression,
Immuno-modulator	Thalidomide	Anti-angiogenic, anti-proliferative, antifibrotic
Anti-fungal	Itraconazole	Decreased TGF- β 1 expression
Autologous stem cell therapy		Mesothelial/submesothelial cellular layer repair

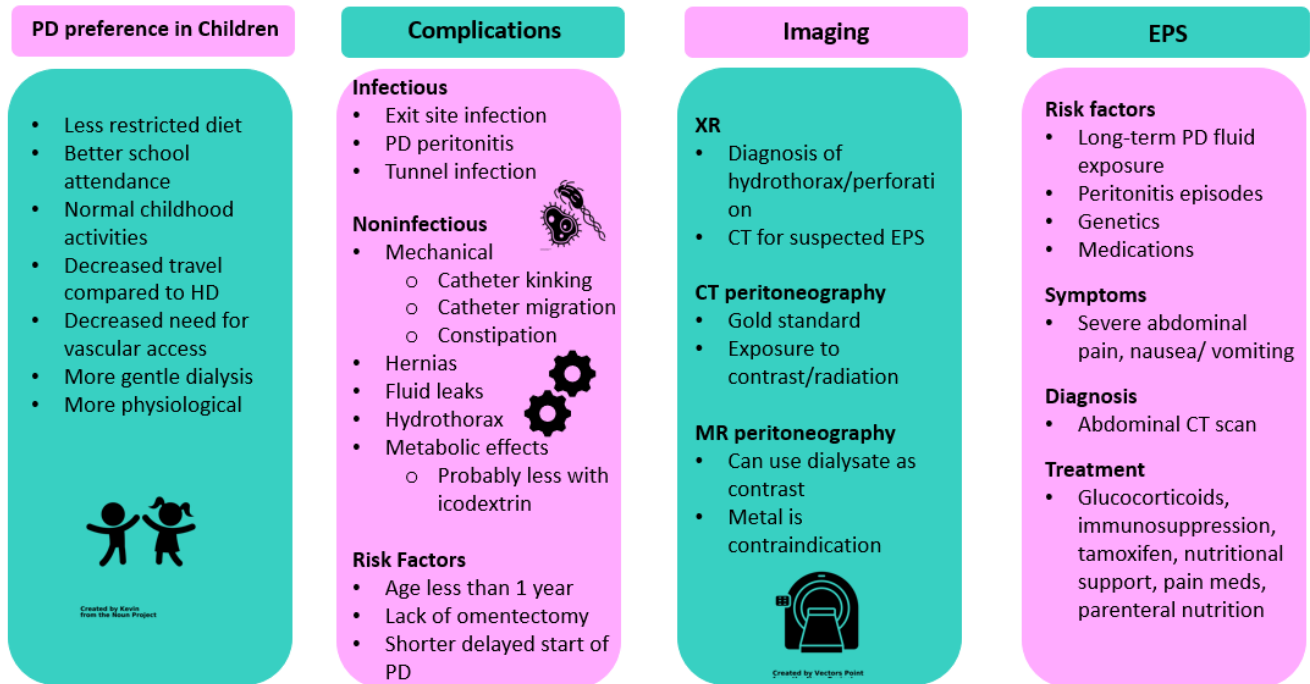

PMID 31744097

15/18 Here is a stepwise approach to catheter malfunction by @bourneauguste

16/18 For children on PD, it is important to be aware of the non-infectious complications which could be as detrimental as infectious!! Here's an infographic summarizing the various complications of PD in children!

Non-Infectious Complications of Peritoneal Dialysis in Children

*PD- Peritoneal Dialysis; HD-Hemodialysis; EPS-Encapsulating Peritoneal Sclerosis
